

Electronic prescribing (ePrescribe) is a way for doctors to send an accurate and understandable prescription electronically from your physician's office to your pharmacy. **Cancer Care Northwest (CCNW)** uses an electronic health record system that allows ePrescribing through a secure electronic prescription connection.

The ePrescribe program also includes the medication history transaction. This program provides health care providers with information about your current and past prescriptions. This allows health care providers to be better informed about potential medication issues unique to you, and to use that information to provide safe, quality care to you.

I agree that CCNW may request and use my prescription medication history from third party pharmacy benefit payers for treatment purposes.

I do not agree that CCNW may request and use my prescription medication history from third party pharmacy benefit payers for treatment purposes.
